

FREE PROMPT PACK · SEEDANCE 2.5 + CLAUDE CODE

The Seedance 2.5 *UGC Ads* Pack

How to generate 30-second creator ads that look like a real person filmed them on a real phone — the three-step recipe, nine copy-paste prompts (seven ready-made ad formats plus two bring-your-own-product templates), and the realism rules that keep them from looking AI-made.

Why Seedance 2.5 for UGC ads

UGC-style creator video is the single best-performing ad format right now — authentic, benefit-led, native to the feed. The problem was always production: creators, filming, reshoots. Seedance 2.5 on the Higgsfield MCP collapses all of it: **one generation gives you a continuous 30-second talking-head take at 1080p with the voice generated in the same pass**, lip-synced to lines you script word for word. No stitching, no separate voiceover, no cuts to hide seams.

PARAMETER	WHAT YOU USE FOR UGC
Model + mode	<code>seedance_2_5</code> with <code>mode: omni_reference</code> — the mode is required whenever you pass reference images. Plain t2v rejects them.
References	Two images via <code>image_references</code> : your product shot and your creator portrait. Pass the generation job ids , not uploads — platform-generated images skip the IP check that stalls raw uploads.
Duration	4–30 seconds. The 30-second one-take is the whole pitch: one unbroken selfie video, exactly the length UGC converts at (10–45s).
Resolution	1080p (1080×1920 vertical) for the ad you ship. Draft at 720p for half the cost while testing a concept.
Aspect ratio	9:16 , always. TikTok, Reels, Shorts.
Audio	<code>generate_audio: true</code> — speech, room tone and lip-sync render natively in the same job. Quote every spoken line in the prompt at its timestamp.
Cost	A 30s 1080p one-take runs about 390 credits. A 720p draft of the same about 195. Both product and creator stills are pennies.
Render time	18–22 minutes for a 30s 1080p job. Submit all your ads in one parallel batch and QA them together.

The formats that convert

The 2026 performance data is unambiguous: UGC video takes the largest share of winning ad creative of any format, the product must appear in the first three seconds, and creative fatigues in about 72 hours on TikTok — which is exactly why generating variants beats hiring creators. The nine prompts in this pack cover the seven UGC structures that keep winning — the review, the confession, the routine, the unboxing, the try-on, the product-only POV, and the taste test — plus two templates for the most common real case of all: you already have the product, and all you have is a photo or a screenshot of it.

The three-step recipe

Every prompt in this pack runs the same pipeline. Give the whole brief to Claude Code with the Higgsfield MCP connected and it executes all three steps — or run the steps yourself in the Higgsfield UI.

- 1 Generate the product shot first (GPT Image 2).**
One clean e-commerce photo: product, simple surface, natural light, *short* label text — a brand name plus two short lines renders perfectly legible; a paragraph turns to gibberish. Set quality high. This image is your product's identity for every ad you ever make for it.
- 2 Generate the creator (Soul 2).**
An "unretouched iPhone front-camera portrait" in the exact room the ad happens in — bare skin texture, no beauty filter, amateur framing. The portrait's room, outfit and lighting should match the video prompt so the model locks onto one coherent scene. Keep the creator's job id: the same face can front an entire series.
- 3 Generate the ad (Seedance 2.5, one take).**
Pass both job ids as `image_references` with mode: `omni_reference`, 9:16, 1080p, duration 30, audio on. The prompt is a timestamped shot list: five beats, each with the exact line the creator speaks in quotes, plus a realism block and an audio spec. The model renders the performance, the voice and the lip-sync in one pass.

The five-beat script skeleton

Every 30-second ad in this pack follows the same arc, and the timestamps matter — they pace the performance. **0–4s HOOK:** mid-thought opener with the product already rising into frame. **4–11s WHAT IT IS:** name it, show the label. **11–18s DEMO:** use it on camera — apply it, eat one, put it on. **18–25s RESULT:** the proof moment, leaning into the lens. **25–30s CLOSE:** one low-pressure line, never a hard sell. About 70–80 spoken words total fills 30 seconds at a natural pace — write more and the delivery rushes.

The Skincare Confession

Best for: serums, moisturizers, haircare, anything applied on camera — the default UGC ad.

Create a 30-second UGC creator ad with the Higgsfield MCP for DEW — a fictional barrier repair serum.

STEP 1 — PRODUCT (gpt_image_2, quality high, 3:4): "Clean e-commerce product photograph of a frosted glass skincare serum bottle with a white dropper cap, minimal matte white label reading 'DEW · Barrier Repair Serum · Hyaluronic + Ceramides', on a beige stone bathroom counter, soft natural window light, photoreal, no watermark."

STEP 2 — CREATOR (soul_2, 3:4, quality 2k): "Unretouched casual iPhone front-camera style portrait of a woman in her late 20s, wavy hair loosely tied back, light freckles, bare skin with visible pores, plain grey ribbed tank top, standing in a bright everyday apartment bathroom, flat natural daylight, authentic amateur selfie framing, no makeup, no beauty filter, no retouching."

STEP 3 — VIDEO (seedance_2_5, mode omni_reference, 9:16, 1080p, duration 30, generate_audio true, both job ids as image_references):

"Continuous unedited 30-second vertical handheld iPhone front-camera selfie video, one single take with no cuts. The woman from the reference stands in her bright bathroom holding the phone at arm's length, talking straight to camera like a friend, slight natural handheld sway. The serum bottle from the reference is the only product.

0-4s: she leans in mid-thought: 'Okay, I need to talk about this, because two weeks ago my skin was a wreck.' while raising the bottle into frame next to her face.

4-10s: taps the label: 'This is the DEW barrier repair serum. Hyaluronic, ceramides... that's literally it.'

10-17s: drops two drops onto her fingertips and pats it onto her cheek: 'It's not sticky. It just sinks in, like water.'

17-24s: tilts her cheek toward the lens into the window light: 'Look at that. No filter, no makeup. That's just my skin now.'

24-30s: back to center, small shrug and grin, holds the bottle up: 'If your skin barrier is fried... just try it. Thank me later.'

Realism: pore-level natural skin texture, flat daylight, authentic amateur framing, no beauty filter, no cinematic grade, no on-screen text.

AUDIO: her real voice lip-synced exactly to the quoted lines, natural conversational pacing with tiny pauses, dry quiet room tone, field-recording quality; no music, no water droplets, no bubbles, no synthesized blips."

Make it yours: swap the product in steps 1 and 3, keep everything else. The hook line is the highest-leverage edit — it must sound like the middle of a story, never like the start of an ad.

The Problem-Ritual-Result Ad

Best for: supplements, coffee, productivity tools — anything bought to fix a daily pain.

Create a 30-second UGC creator ad with the Higgsfield MCP for RISE — fictional lion's mane focus gummies.

STEP 1 — PRODUCT (gpt_image_2, quality high, 3:4): "Clean e-commerce product photograph of an amber glass supplement jar with a black lid, kraft-paper label reading 'RISE · Lion's Mane Focus Gummies', a few translucent red berry gummies beside the jar on a light wood kitchen counter, bright daylight, photoreal, no watermark."

STEP 2 — CREATOR (soul_2, 3:4, quality 2k): "Unretouched casual iPhone front-camera style portrait of a man in his late 20s, short dark hair, light stubble, charcoal hoodie, sitting at a cluttered home desk with a laptop and coffee mug behind him, everyday apartment daylight, real skin texture, authentic amateur selfie framing, tired-but-friendly expression, no retouching."

STEP 3 — VIDEO (seedance_2_5, mode omni_reference, 9:16, 1080p, duration 30, generate_audio true, both job ids as image_references):

"Continuous unedited 30-second vertical handheld iPhone front-camera selfie video, one single take with no cuts. The man from the reference sits at his home desk, phone in one hand, talking to camera like he's telling a friend a secret, slight handheld movement. The gummies jar from the reference is the only product.

0-4s: 'So I used to hit a wall every single day at 2pm. Like, useless.' while lifting the jar into frame.

4-11s: turns the label to the lens: 'These are lion's mane focus gummies. I take two with my coffee, that's the whole routine.'

11-18s: opens the jar, pops one gummy in his mouth, chews, nods: 'They actually taste good, which... surprised me.'

18-25s: gestures back at the laptop, jar still in hand: 'No jitters, no crash. I've cleared my whole list before lunch every day this week.'

25-30s: leans in slightly, taps the lid: 'Just run it for one week. That's all I'm saying.'

Realism: real skin texture with stubble detail, everyday apartment daylight, authentic amateur framing, no beauty filter, no cinematic grade, no on-screen text.

AUDIO: his real voice lip-synced exactly to the quoted lines, relaxed low-key delivery, dry quiet apartment room tone, field-recording quality; no music, no water droplets, no bubbles, no synthesized blips."

Make it yours: the eating-on-camera beat is what sells a consumable — never cut it. For a drink, swap the beat for a sip and an honest little exhale; for an app, swap it for tapping through the phone.

The Cozy Gadget Demo

Best for: beauty devices, wellness gadgets, home tech — products with a visible "wow" state.

Create a 30-second UGC creator ad with the Higgsfield MCP for a fictional LED red-light therapy face mask.

STEP 1 – PRODUCT (gpt_image_2, quality high, 3:4): "Clean e-commerce product photograph of a white silicone LED light-therapy face mask with rows of small red and amber LEDs glowing softly, resting on a marble vanity next to its white controller remote, soft evening lamp light, photoreal, no text on product, no watermark."

STEP 2 – CREATOR (soul_2, 3:4, quality 2k): "Unretouched casual iPhone front-camera style portrait of a Black woman in her early 30s, neat shoulder-length braids, glowing real skin with visible pores, oversized cream sweatshirt, sitting on her bed in a cozy warmly lit bedroom in the evening, string lights softly blurred behind her, authentic amateur selfie framing, warm genuine smile, minimal makeup, no retouching."

STEP 3 – VIDEO (seedance_2_5, mode omni_reference, 9:16, 1080p, duration 30, generate_audio true, both job ids as image_references – if a dark-mood preset is recommended instead of submitting, decline it and resubmit):

"Continuous unedited 30-second vertical handheld iPhone front-camera selfie video, one single take with no cuts. The woman from the reference sits on her bed in her warmly lit bedroom, phone at arm's length, warm playful energy, slight natural handheld sway. The LED mask from the reference, LEDs glowing, is the only product.

0–4s: 'Everyone keeps asking what I changed about my skin... it's this thing.' while raising the mask into frame, LEDs already glowing red.

4–11s: turns the glowing mask toward the lens: 'Red light therapy mask. Ten minutes a night, that's it.'

11–18s: places the glowing mask over her face, holds it there a beat, laughs: 'I know I look like a movie villain right now.'

18–25s: lifts the mask off, leans toward the lens showing her cheek: 'But my dark spots are fading, and I do it literally lying in bed.'

25–30s: hugs the mask to her chest, grins: 'Laziest skincare I own. Obsessed.'

Realism: pore-level natural skin texture, warm cozy lamp light, authentic amateur framing, no beauty filter, no cinematic grade, no on-screen text.

AUDIO: her real voice lip-synced exactly to the quoted lines, warm amused delivery, dry quiet bedroom room tone, field-recording quality; no music, no water droplets, no bubbles, no synthesized blips."

Make it yours: the self-deprecating joke mid-demo ("movie villain") is doing real work — it's the beat that makes the whole ad feel human. Give every gadget ad one moment where the creator laughs at themselves.

The First Reaction

Best for: launches, premium packaging, tech — when the reveal itself is the content.

Create a 30-second UGC creator ad with the Higgsfield MCP for AURA — fictional premium wireless earbuds.

STEP 1 — PRODUCT (gpt_image_2, quality high, 3:4): "Clean e-commerce product photograph of a matte sage-green earbuds charging case, lid open showing white earbuds inside, sitting on top of its minimal matte kraft box printed only with 'AURA' in small dark letters, on a light desk, soft daylight, photoreal, no watermark."

STEP 2 — CREATOR (soul_2, 3:4, quality 2k): "Unretouched casual iPhone front-camera style portrait of a woman in her early 20s, straight dark hair with curtain bangs, silver hoop earrings, black long-sleeve top, sitting at a tidy desk by a window in a small apartment, neutral daylight, real skin texture, authentic amateur selfie framing, curious excited expression, no retouching."

STEP 3 — VIDEO (seedance_2_5, mode omni_reference, 9:16, 1080p, duration 30, generate_audio true, both job ids as image_references):

"Continuous unedited 30-second vertical handheld iPhone front-camera selfie video, one single take with no cuts. The woman from the reference sits at her desk, phone propped or held in one hand, genuine first-reaction energy. The AURA earbuds box and sage case from the reference are the only product.

0-4s: she holds the sealed kraft box up to the lens: 'Okay, these finally came, and I've been waiting three weeks. We're opening them right now.'

4-11s: peels the box open on camera, tilts it to show the case seated inside: 'Oh, okay... the box is already nicer than my phone's was.'

11-18s: lifts out the sage case, clicks the lid open near the lens: 'Listen to that click. And this green... why is this green so good?'

18-25s: puts one earbud in her ear, eyes widen, voice drops a little: 'Oh. Okay. That's... genuinely so much better than what I've been using.'

25-30s: looks back at the case in her palm, half-laughs: 'Yeah, these are staying in. Sorry to my old pair.'

Realism: real skin texture, neutral daylight, authentic amateur framing, no beauty filter, no cinematic grade, no on-screen text.

AUDIO: her real voice lip-synced exactly to the quoted lines, genuine unscripted-feeling reactions with small pauses, real paper and plastic sounds from the unboxing synced to her hands, dry room tone, field-recording quality; no music, no water droplets, no bubbles, no synthesized blips."

Make it yours: the arc is anticipation → package → product → first use → verdict. The reveal must land mid-video, not at the start — the sealed box IS the hook.

The Fit Check

Best for: apparel, activewear, accessories, jewelry — anything worn.

Create a 30-second UGC creator ad with the Higgsfield MCP for a fictional cloud-soft oversized hoodie brand called LOFT.

STEP 1 — PRODUCT (gpt_image_2, quality high, 3:4): "Clean e-commerce product photograph of an oatmeal-cream heavyweight oversized hoodie, thick soft fleece visibly plush, neatly folded on a light linen surface with a small woven label reading 'LOFT', soft daylight, photoreal, no watermark."

STEP 2 — CREATOR (soul_2, 3:4, quality 2k): "Unretouched casual iPhone front-camera style portrait of a woman in her mid 20s, blonde hair in a claw clip, minimal makeup, plain white tee, standing in front of a full-length mirror in a bright bedroom, natural daylight, real skin texture, authentic amateur mirror-selfie framing, relaxed confident expression, no retouching."

STEP 3 — VIDEO (seedance_2_5, mode omni_reference, 9:16, 1080p, duration 30, generate_audio true, both job ids as image_references):

"Continuous unedited 30-second vertical handheld iPhone selfie video, one single take with no cuts, filmed partly to the front camera and partly into her full-length mirror. The woman from the reference is in her bright bedroom; the oatmeal LOFT hoodie from the reference is the only product.

0-4s: front camera, she holds the folded hoodie up and squishes it: 'This is the hoodie everyone's been gatekeeping. Look how thick this is.'

4-11s: she pulls it on over her tee in frame, hair clip and all, laughing as her head pops through: 'Okay, first of all, it's like putting on a duvet.'

11-18s: turns to the mirror, phone visible in hand, checks the fit side-on: 'It's oversized but it still has, like, a shape? See the drop shoulder?'

18-25s: back to front camera close, rubs the sleeve between her fingers near the lens: 'And the inside is the softest thing I own. I'm not exaggerating.'

25-30s: hands in the front pocket, little shoulder shrug: 'I got the oatmeal one. I already know I'm buying the grey.' Realism: real fabric texture and drape, natural daylight, authentic amateur framing, no beauty filter, no cinematic grade, no on-screen text.

AUDIO: her real voice lip-synced exactly to the quoted lines, light amused delivery, soft fabric rustle synced to the try-on, dry room tone, field-recording quality; no music, no water droplets, no bubbles, no synthesized blips."

Make it yours: texture close-ups sell fabric better than any adjective — always script one beat where the material touches the lens. The "buying the grey" closer is a proven pattern: repurchase intent reads as the strongest possible review.

The Hands & Voiceover Ad

Best for: kitchen tools, home goods, stationery — when the product should be the only star.

Create a 30-second UGC product ad with the Higgsfield MCP for FORGE — a fictional Japanese-steel chef's knife. No creator on camera: hands and voiceover only.

STEP 1 — PRODUCT (gpt_image_2, quality high, 3:4): "Clean e-commerce product photograph of a chef's knife with a hammered Japanese steel blade and dark walnut handle, lying on a light wood cutting board beside a ripe tomato, bright kitchen daylight, photoreal, no watermark."

STEP 2 — no creator portrait for this one. Instead generate a scene anchor (gpt_image_2, quality high, 3:4): "First-person POV photo looking down at a light wood cutting board on a kitchen counter, a woman's hands with short clean nails resting at the edge, a ripe tomato and fresh herbs beside the board, bright window daylight from the left, authentic iPhone photo, photoreal."

STEP 3 — VIDEO (seedance_2_5, mode omni_reference, 9:16, 1080p, duration 30, generate_audio true, both job ids as image_references):

"Continuous unedited 30-second vertical handheld iPhone video, one single take with no cuts, first-person POV looking down at the cutting board from the reference. Only the cook's hands and the FORGE knife from the reference ever appear — no face, no body. A relaxed female voice narrates over the footage like she's talking to a friend, not a commercial announcer.

0-4s: her hands lift the knife off the board, tilting the hammered blade in the window light. VO: 'I put off buying a real knife for years. Biggest kitchen mistake I ever made.'

4-11s: she slices the tomato in slow, effortless strokes, paper-thin slices falling. VO: 'Look at this. No sawing, no squashing. The weight just does it for you.'

11-18s: she rocks the blade through a pile of herbs, fast and confident. VO: 'This is the part that got me. It makes you feel like you know what you're doing.'

18-25s: she wipes the blade with a cloth and rests it on the board, label side up. VO: 'It's one knife. It replaced four of mine.'

25-30s: hands still, knife centered on the board in the light. VO: 'If you cook at all... this is the one thing worth the money.'

Realism: real hand and skin detail, bright natural kitchen daylight, authentic amateur POV framing, no cinematic grade, no on-screen text.

AUDIO: warm natural female voiceover exactly on the quoted lines, real knife-on-board sounds synced to each cut, dry kitchen room tone, field-recording quality; no music, no water droplets, no bubbles, no synthesized blips."

Make it yours: POV works when the satisfaction is visual — slicing, pouring, peeling, clicking. Match every voiceover line to what the hands are doing in that exact beat; drift is what makes a voiceover feel fake.

The Honest Reaction

Best for: food, beverages, snacks — the reaction is the entire ad.

Create a 30-second UGC creator ad with the Higgsfield MCP for VOLT — a fictional sparkling yuzu energy water with zero sugar.

STEP 1 — PRODUCT (gpt_image_2, quality high, 3:4): "Clean e-commerce product photograph of a slim sleek matte-white beverage can with a thin yellow band, label reading 'VOLT · Sparkling Yuzu · Zero Sugar', beads of condensation on the can, on a concrete kitchen counter, bright daylight, photoreal, no watermark."

STEP 2 — CREATOR (soul_2, 3:4, quality 2k): "Unretouched casual iPhone front-camera style portrait of a man in his early 30s, athletic build, buzzed hair, gym t-shirt, standing in his kitchen with a fridge behind him, bright daylight, real skin texture with light post-workout flush, authentic amateur selfie framing, skeptical half-smile, no retouching."

STEP 3 — VIDEO (seedance_2_5, mode omni_reference, 9:16, 1080p, duration 30, generate_audio true, both job ids as image_references):

"Continuous unedited 30-second vertical handheld iPhone front-camera selfie video, one single take with no cuts. The man from the reference stands in his kitchen, phone at arm's length, skeptical-friend energy. The VOLT can from the reference is the only product.

0-4s: he holds the can up to the lens, unimpressed: 'Every energy drink says it doesn't taste like battery acid. Every energy drink is lying.'

4-11s: turns the label to camera: 'Sparkling yuzu, zero sugar. Sure. We've heard that before.'

11-18s: cracks the can open on camera, takes a real slow sip, pauses, brow furrows, then genuine surprise: 'Wait.'

18-25s: looks at the can, then back at the lens: 'That actually just tastes like... a really good lemon soda? Where's the fake sweetener taste?'

25-30s: takes a second longer sip, points at the can: 'Okay. I take it back. This one's not lying.'

Realism: real skin texture, bright kitchen daylight, authentic amateur framing, no beauty filter, no cinematic grade, no on-screen text.

AUDIO: his real voice lip-synced exactly to the quoted lines, dry sarcastic-to-surprised delivery, the real crack-hiss of the can opening and quiet carbonation synced to the sip, dry kitchen room tone, field-recording quality; no music, no water droplets, no synthesized blips."

Make it yours: the skeptic-converted arc outperforms straight praise for anything edible — the first ten seconds attack the category, not the product. The single word 'Wait.' after the sip is the whole ad; keep one beat that quiet.

The Attached-Photo Review

Best for: YOUR actual product. Attach one photo or screenshot of it, fill the brackets, paste.

I've attached a photo of my product. Create a 30-second UGC creator ad for it with the Higgsfield MCP. The product is [PRODUCT NAME] – [WHAT IT IS IN ONE LINE], and my customer is [WHO BUYS IT].

STEP 1 – RE-SHOOT MY PRODUCT: upload my attached image to Higgsfield, then use gpt_image_2 (quality high, 3:4) WITH that upload as the reference image: "Using the attached product photo as the exact reference, recreate this product faithfully as a clean e-commerce product photograph – identical shape, colors, label text and logo – placed on [a surface that fits the product], soft natural light, photoreal, no watermark." Use the RESULT's job id from here on, never the raw upload – generated jobs pass straight into video reference slots; raw uploads stall in the IP check.

STEP 2 – CREATOR (soul_2, 3:4, quality 2k): "Unretouched casual iPhone front-camera style portrait of [describe your ideal customer: age, look, outfit], in [the room where this product gets used], natural light, bare real skin texture, authentic amateur selfie framing, friendly relaxed expression, no beauty filter, no retouching."

STEP 3 – VIDEO (seedance_2_5, mode omni_reference, 9:16, 1080p, duration 30, generate_audio true, both job ids as image_references):

"Continuous unedited 30-second vertical handheld iPhone front-camera selfie video, one single take with no cuts. The person from the reference is in [the same room], phone at arm's length, talking to camera like a friend, slight natural handheld sway. The [PRODUCT NAME] from the reference is the only product.

0–4s: mid-thought hook while raising the product into frame: '[A LINE ABOUT THE PAIN THIS PRODUCT ENDED – e.g. I was this close to giving up on ___ until this showed up.]'

4–11s: turns the label to the lens: 'This is [PRODUCT NAME]. [ONE LINE ON WHAT IT IS AND THE ONE THING THAT MAKES IT DIFFERENT.]'

11–18s: uses it on camera – [THE DEMO ACTION: applies it / opens it / turns it on / pours it]: '[ONE LINE REACTING HONESTLY TO USING IT.]'

18–25s: leans toward the lens with the proof: '[THE RESULT LINE – what changed, stated like a fact to a friend, not a claim.]'

25–30s: relaxed close, product held up: '[LOW-PRESSURE CLOSER – e.g. Just try it once. That's all it took for me.]' Realism: pore-level natural skin texture, natural light, authentic amateur framing, no beauty filter, no cinematic grade, no on-screen text.

AUDIO: their real voice lip-synced exactly to the quoted lines, natural conversational pacing, dry quiet room tone, field-recording quality; no music, no water droplets, no bubbles, no synthesized blips."

Make it yours: the re-shoot step is not optional polish — it is what makes your real label survive into the video AND what gets the reference past the platform's IP check. One good phone photo of the product is enough; the model does the studio work.

The Screenshot-to-POV Ad

Best for: turning a store-listing screenshot into a faceless hands-and-voiceover demo — no creator needed.

I've attached a screenshot of my product from [MY STORE / Amazon / Etsy listing]. Create a 30-second faceless UGC-style ad for it with the Higgsfield MCP — hands and voiceover only, no one on camera. The product is [PRODUCT NAME] — [WHAT IT DOES IN ONE LINE].

STEP 1 — RE-SHOOT FROM THE SCREENSHOT: upload the attached screenshot, then gpt_image_2 (quality high, 3:4) with it as reference: "Using the product in the attached screenshot as the exact reference — identical shape, colors, label and logo, ignore any website interface, buttons or text around it — recreate it as a clean photorealistic product photograph in [the setting where it gets used], natural daylight, no watermark." Use this job id everywhere; never pass the raw screenshot into the video.

STEP 2 — SCENE ANCHOR (gpt_image_2, quality high, 3:4): "First-person POV photo looking down at [the surface where the product gets used — counter, desk, bathroom shelf], a person's hands resting at the edge, [one or two props that belong there], bright window daylight, authentic iPhone photo, photoreal."

STEP 3 — VIDEO (seedance_2_5, mode omni_reference, 9:16, 1080p, duration 30, generate_audio true, both job ids as image_references):

"Continuous unedited 30-second vertical handheld iPhone video, one single take with no cuts, first-person POV over the scene from the reference. Only the hands and the [PRODUCT NAME] from the reference ever appear — no face, no body. A relaxed [male/female] voice narrates like they're talking to a friend, never like an announcer.

0-4s: hands lift the product into the light, turning it slowly. VO: '[HOOK — the moment you realized you needed this.]'

4-11s: hands show the key detail up close — [the label / the mechanism / the texture]. VO: '[WHAT IT IS, and the one spec or ingredient that actually matters.]'

11-18s: hands use it in real time — [THE CORE ACTION, described specifically]. VO: '[WHAT IT FEELS LIKE IN USE — the honest observation.]'

18-25s: hands present the outcome — [the result on camera]. VO: '[THE RESULT — what it replaced, saved, or fixed.]'

25-30s: hands set the product down centered in the light, still. VO: '[LOW-PRESSURE CLOSER — one sentence, no hype.]'

Realism: real hand and skin detail, natural daylight, authentic amateur POV framing, no cinematic grade, no on-screen text.

AUDIO: warm natural voiceover exactly on the quoted lines, real handling sounds synced to the hands' actions, dry room tone, field-recording quality; no music, no water droplets, no bubbles, no synthesized blips."

Make it yours: this is the fastest path from "I sell this" to a running ad — one screenshot in, one finished ad out, nobody's face involved. Tell the model to ignore the interface around the product or the ad inherits stray buttons and price tags from your listing.

Seven rules that keep it real

1 **Product in frame within the first three seconds.**

Ads where the viewer instantly understands what's being sold convert measurably better. Script the product rising into frame during the hook line, never after it.

2 **Write the realism block or get AI-slop.**

"Pore-level natural skin texture, flat daylight, authentic amateur framing, no beauty filter, no cinematic grade" — omit it and you get waxy skin, teal-orange bokeh, and an ad everyone scrolls past. Amateur is the aesthetic; don't let the model be cinematic.

3 **Quote every spoken word, timestamped.**

Unquoted "she talks about the product" produces mumbling filler. Quoted lines at beats render clean lip-synced speech — and 70–80 words is the ceiling for 30 seconds.

4 **Ban the sounds you don't want.**

End the audio spec with a short ban list — "no music, no water droplets, no bubbles, no synthesized blips." Native audio loves adding droplet tones; keep the list short inside a lean prompt or long prompts start failing.

5 **Expect the mirror lottery.**

Some takes render mirrored like a real front camera — authentic, but your label reads backwards. It's consistent within a clip, so one `ffmpeg hflip` pass fixes every frame. Check the label before shipping, not after.

6 **QA on frozen frames, not vibes.**

Pull a 3×3 contact sheet (`ffmpeg tile filter`) and check: exactly one product, two hands max, label legible, face matches the reference, no baked-in captions. Motion hides defects that stills expose instantly.

7 **Volume is the strategy.**

Ad creative fatigues in about 72 hours. At roughly 390 credits per finished ad, generating a fresh variant twice a week costs less than one hour of a human creator — same recipe, new hook, new creator, same product job id.

Want the full system — not just the prompts?

Inside the AI Workshop community you get the complete skill installs, the step-by-step lessons, and the playbooks for selling UGC ad packages to real brands. Start with the free community — the link is in the video description, right where you found this pack.
